Meat type

(a) In *Animal welfare Uniform* tax scheme (b) In *Climate Differentiated* tax scheme

Supplementary Figure 2: Examples of illustrative graphs in the tax scheme description.

1. Differentiated tax rate:

Source: GLEAM

2. Uniform tax rate:

Source: Versorgungsbilanz 2020

Supplementary Figure 3: Calculation of tax levels. Source for emission intensities: GLEAM 2017 (FAO 2017. Global Livestock Environmental Assessment Model. Version 2.0.); source for meat consumption by meat type: Versorgungsbilanz 2020 (BLE 2021. Fleisch und Geflügel - Versorgungsbilanz). The original data and the corresponding tax level calculations are available in the Excel file "Calculation of tax levels".

2 Sample statistics

	Sample	German population	p-values
Female	50.4	50.2	0.799
Age groups			
Age <40 years	34.0	36.9	0.001
Age 40-59 years	39.5	39.4	0.935
Age 60+ years	26.5	23.7	0.001
Region			
North	18.2	18.0	0.731
East	17.0	17.3	0.694
South	29.0	29.3	0.695
West	35.8	35.3	0.607
Education			
Low	32.6	32.0	0.513
Middle	26.3	32.0	0.000
High	41.1	35.0	0.000
Net household income			
<€2000	28.4	27.0	0.096
€2000-3999	43.3	45.0	0.066
€4000+	28.3	28.0	0.721

Supplementary Table 1: Sample characteristics and comparison with German adult population. Column 1 shows means for the restricted survey sample of 2855 respondents, column 2 statistics for the German adult population. Data on sex, age and region of living on federal state level are from the Federal Statistical Office of Germany for December 2020. Data on education and income are from the best for planning 2020 IIII database. Federal states are pooled to regions. Education refers to highest educational qualification: Low = not graduated (yet), certificate of general secondary education; Middle = certificate of intermediate secondary education; High = university-entrance diploma, university degree/PhD. Net household income refers to monthly values. p-values in column 3 refer to paired two-sided t-tests.

	Animal welfare Uniform Low	Animal welfare Uniform High	Animal welfare Diff Low	Animal welfare Diff High	Climate Uniform Low	Climate Uniform High	Climate Diff Low	Climate Diff High	Total

No. of kids in household	0.40	0.35	0.35	0.37	0.38	0.40	0.39	0.42	0.38
Have kids	0.56	0.55	0.55	0.59	0.55	0.60	0.56	0.57	0.56
Observations	354	360	361	355	359	350	342	359	2,840

Supplementary Table 2: Demographics by experimental group. The table shows the means of each dummy variable by experimental group and for the entire sample in the last column. Observations for the full sample are lower because 15 participants chose not to report if they have kids.

Tax scheme	Justification	Degree of differentiation	Low salience	High salience	Total
1	Animal welfare	Uniform	355	362	717
2	Animal welfare	Differentiated	364	358	722
3	Climate	Uniform	360	353	713
4	Climate	Differentiated	343	360	703
			1,422	1,433	2,855

Supplementary Table 3: Number of participants per experimental group.

3 Robustness checks

Supplementary Figure 4: Rates of abstention from voting across tax schemes. The graph shows the percentage of participants who chose I do not want to vote. at each tax level proposed by tax scheme. Tax justifications are distinguished by line color (animal welfare vs. climate) and degree of differentiation by line style (uniform vs. differentiated). The lowest tax level corresponds to a carbon price of €25/t CO₂, the highest tax level to €200/t CO₂

Supplementary Figure 5: Effect of tax attributes and salience as well as control variables on support for tax on meat. Data points indicate mean percentage point estimates with cluster-robust 95% confidence intervals from linear regressions of valid votes for a proposed tax scheme (1 for yes, 0 for no) for $n=15,908$ observations (corresponding to 2,759 respondents) in Models 1-3 and $n=15,835$ observations (corresponding to 2,745 respondents) in Models 1_C-3_C. Independent variables are tax levels in €/kg (continuous), tax justification (dummy variable: 0 for animal welfare, 1 for climate), degree of differentiation (dummy variable: 0 for uniform, 1 for differentiated tax), salience (dummy variable: 0 for low salience/belief elicitation task after referendum task, 1 for high salience/belief elicitation task before referendum task). Model 1 comprises independent variables tax levels, tax justification and degree of differentiation. In Model 2, salience is added. Model 3 comprises all independent variables mentioned, including the interaction term between degree of differentiation and salience. Models 1_C-3_C include the following control variables: demographics as shown in Supplementary Table 2, views on government, political preferences, voting for Green party, identifying as pescetarian/vegetarian/vegan, consuming meat, buying meat, purchase frequencies by meat type, purchase frequency of organic meat, importance of animal welfare/climate/organic in purchases, consequentiality perception, social desirability bias and attention.

Supplementary Figure 6: Effect of tax levels as six binary variables, tax attributes and salience on support for tax on meat. Data points indicate mean percentage point estimates with cluster-robust 95% confidence intervals from linear regressions of valid votes for a proposed tax scheme (1 for yes, 0 for no) for $n=15,908$ observations (corresponding to 2,759 respondents) in Models 1-3 and $n=15,835$ observations (corresponding to 2,745 respondents) in Models 1_C-3_C. Independent variables are six tax levels in €/kg (6 dummy variables with €0.19/kg as the base category), tax justification (dummy variable: 0 for animal welfare, 1 for climate), degree of differentiation (dummy variable: 0 for uniform, 1 for differentiated tax) and salience (dummy variable: 0 for low salience/belief elicitation task after referendum task, 1 for high salience/belief elicitation task before referendum task). Model 1 comprises independent variables tax levels as six binary variables, tax justification and degree of differentiation. In Model 2, salience is added. Model 3 comprises all independent variables mentioned, including the interaction term between degree of differentiation and salience. Models 1_C-3_C include the following control variables: demographics as shown in Supplementary Table 2, views on government, political preferences, voting for Green party, identifying as pescetarian/vegetarian/vegan, consuming meat, buying meat, purchase frequencies by meat type, purchase frequency of organic meat, importance of animal welfare/climate/organic in purchases, consequentiality perception, social desirability bias and attention.

5 Survey questionnaire

The survey was conducted in German. The questionnaires on the following pages have been translated into English.

Pages 19-20 show the quota questionnaire. Quotas regarding sex, age, region of living, education and monthly net household income were tracked by the panel provider. The first five questions were implemented on its website. Respondents who matched the quota were redirected to our survey questionnaire, starting on page 21.

The term *QUOTA* on page 34 refers to the experimental groups. At this point in the survey, respondents are randomized into one of the eight experimental groups.

The survey questionnaire contains placeholder elements (*Script*) due to the programming structure of the survey. The placeholder is replaced by information on the respective tax scheme depending on the experimental group respondents have been randomized into. Starting on page 71, we added screenshots of how these placeholders looked like in the survey.

IntroSurvey:

Welcome to the study on eating habits

This is a scientific study conducted on behalf of the University of Hamburg. It will take about **15 minutes** to answer the questions. In the course of the survey, you have the chance to receive an additional bonus in the amount of max. 100 Mingle points. The corresponding questions are marked with the heading "Bonus".

Please answer all questions as conscientiously and honestly as possible. All information will be treated confidentially and is anonymous. It will not be possible to link your answers to your name or address. The information will only be used for scientific purposes and under no circumstances will personal data be passed on to third parties.

Please feel free to submit comments on this survey after it is completed.

Thank you for your support!

Recent research on decision making shows that decisions are influenced by context. Different human emotions, prior knowledge, experience and the environment can influence decisions. To understand how people make decisions, we are interested in your assessment. In particular, we are interested in whether you have taken the time to read the question to this point. If not, some of your answers tell us little about how you make decisions in reality. To show that you have read this far, please ignore the question below about your feelings. Instead, please select "None of the above" as your answer.

Please choose any words that describe how you are feeling right now.

The following pages are about your opinion on the introduction of a **levy on meat products** in Germany. You will receive some information about this in a moment.

Please note: With this survey, we would like to capture as accurately as possible the opinion of the German population on this topic. It is therefore **very important** that you **read all the information provided carefully** and **answer the questions honestly**.

Do you agree to **read** the information **carefully** and answer the questions **honestly**?

- Yes, I will read carefully and give honest answers.
- No. I will not read carefully and not give honest answers.
- I can promise neither one nor the other.

Many measures on meat consumption are currently being discussed in German politics.

One proposal is to impose an **additional levy on meat products** (fresh meat, sausages and cold cuts).

Please read the following proposal carefully.

[Script]

:exref:

Now imagine that you can **participate in a Germany-wide referendum** on the  shown on the previous page.

On the next pages you will see **6 different proposals** one after the other. All proposals differ only in the amount of the levy.

As in a real referendum, you can **vote for or against** the proposal shown.

Please consider each proposal independently of the others. Vote as if the **proposal shown were the only one on the ballot**.

Your responses are important and should be heard.

After completion of the survey, we will send the results of this part of the survey to the **Committee on Food and Agriculture** and the **Committee on the Environment, Nature Conservation and Nuclear Safety** of the **German Bundestag**.

For each of the 6 proposals you are about to see, we inform the committees of the **proportion of respondents who voted for or against**. You can see the template for the letter to the committees below.

The letter is really sent to the two committees mentioned.

We only communicate the summarized results of the vote to the committees. **Your personal vote remains anonymous and secret**. No one, including the research team, can match your answers to your name or identity.

clibelothallintro

This survey asks people between the ages of 18 and 74 who live in Germany and maps the actual population structure of Germany for this age group.

What do you think?

Out of 100 respondents who were also asked the question about the development of **general meat consumption**, how many gave the answers "will decrease" and "will increase"?

Please estimate 2 numbers on this page: one for each answer "*will decrease*" and "*will increase*". The value for the answer "*will remain the same*" is calculated automatically in each line from your entries.

For each guess, if your estimated number differs from the correct number by 2 or less, you will receive an additional payment of **10 mingle points**. So you can get an additional payment of **max. 20 mingle points** on this page.

clibelothall

How many of 100 respondents gave the following answers?

	will decrease ↘	will increase ↗
General meat consumption...	<input type="text"/>	<input type="text"/>

The value for "*will remain the same*" must be at least 0 and must not be negative. The sum must add up to 100.

awbelothallintro

This survey asks people between the ages of 18 and 74 who live in Germany and maps the actual population structure of Germany for this age group.

What do you think?

Out of 100 respondents who were also asked the question about the development of **general meat consumption**, how many gave the answers "will decrease" and "will increase"?

Please estimate 2 numbers on this page: one for each answer "*will decrease*" and "*will increase*". The value for the answer "*will remain the same*" is calculated automatically in each line from your entries.

For each guess, if your estimated number differs from the correct number by 2 or less, you will receive an additional payment of **10 mingle points**. So you can get an additional payment of **max. 20 mingle points** on this page.

awbelothall

How many of 100 respondents gave the following answers?

will decrease will increase
↓ ↗

General meat consumption...

The value for "*will remain the same*" must be at least 0 and must not be negative. The sum must add up to 100.

Next

awbelothdiffintro

We also asked you how consumption by husbandry level would develop in Germany as a result of the animal welfare levy shown.

What do you think?

Out of 100 respondents who were also asked the questions about the development of **meat consumption by husbandry level**, how many gave the answers "will decrease" and "will increase"?

Please estimate 4x2 numbers on this page: two for each husbandry level for the answers "*will decrease*" and "*will increase*". The value for the answer "*will remain the same*" is calculated automatically in each line from your entries. For each guess, if your estimated number differs from the correct number by 2 or less, you will receive an additional payment of **10 mingle points**. So you can get an additional payment of **max. 80 mingle points** on this page.

awbelothdiff

How many of 100 respondents gave the following answers?

Many measures on meat consumption are currently being discussed in German politics.

One proposal is to impose an **additional levy on meat products** (fresh meat, sausages and cold cuts).

[Please read the following proposal carefully.](#)

Proposal for an **animal welfare levy on meat products**:

- The government introduces a levy on meat products (fresh meat, sausages and spread).
- The levy is charged for every kilogram of meat sold - thus increasing the price you pay as a consumer.
- The **levy per kilogram** is based on the husbandry level.
- The following husbandry levels are considered: Level 1 (Stable housing), Level 2 (Stable housing Plus), Level 3 (Outside climate), Level 4 (Premium/Organic).
- The **amount of the levy is the same** for all husbandry levels. No levy is charged for plant-based alternatives.
- The figure below shows how the proposed levy, or price premium, compares to **each other** for each husbandry level. The exact amount of the levy will still be communicated to you in the course of the survey.

Comparison of the levy for different husbandry systems (per kg)

- If you would like to know what criteria must be met for each husbandry level, click on the image below:

- The **revenue** from this levy will be invested in **improving animal welfare in livestock farming**.

Now imagine that you can **participate in a Germany-wide referendum** on the animal welfare levy shown on the previous page.

On the next pages you will see **6 different proposals** one after the other. All proposals differ only in the amount of the levy.

As in a real referendum, you can **vote for or against** the proposal shown.

Please consider each proposal independently of the others. Vote as if the proposal shown were the only one on the ballot.

Your responses are important and should be heard.

After completion of the survey, we will send the results of this part of the survey to the **Committee on Food and Agriculture** and the **Committee on the Environment, Nature Conservation and Nuclear Safety** of the **German Bundestag**.

For each of the 6 proposals you are about to see, we inform the committees of the **proportion of respondents who voted for or against**. You can see the template for the letter to the committees below.

The letter is really sent to the two committees mentioned.

We only communicate the summarized results of the vote to the committees. **Your personal vote remains anonymous and secret**. No one, including the research team, can match your answers to your name or identity.

3. Januar 2022

Betreff:
Studie zu Präferenzen der deutschen Bevölkerung für eine Tierwohlabgabe auf Fleischprodukte

Sehr geehrte Mitglieder des Ausschusses für Ernährung und Landwirtschaft und für Umwelt,
sehr geehrte Mitglieder des Ausschusses für Umwelt Naturschutz und nukleare Sicherheit,

wir sind ein Forschungsteam der Universität Hamburg und haben im Dezember 2021 eine wissenschaftliche Studie zu den Präferenzen der deutschen Bevölkerung für eine Abgabe auf Fleischprodukte durchgeführt.

Wir haben einer für die deutsche Bevölkerung repräsentativen Stichprobe an Teilnehmenden den folgenden Vorschlag für eine **Tierwohlabgabe auf Fleischprodukte** vorgestellt:

- Die Regierung führt eine Abgabe auf Fleischprodukte (frisches Fleisch, Wurst und Aufstrich) ein.
- Die Abgabe wird für jedes verkaufte Kilogramm Fleisch erhoben - sie erhöht damit den Preis, den Verbraucher:innen bezahlen.
- Die **Abgabe pro Kilogramm** orientiert sich an der Haltungsform der Tiere.
- Folgende Haltungsformen werden berücksichtigt: Stufe 1 (Stallhaltung), Stufe 2 (Stallhaltung Plus), Stufe 3 (Außenklima), Stufe 4 (Premium/Bio).
- Die **Höhe** der Abgabe ist von der Haltungsformstufe **abhängig - je höher die Haltungsformstufe, desto niedriger die Abgabe pro Kilogramm**. Für pflanzliche Alternativen wird keine Abgabe erhoben.
- Die **Einnahmen** aus dieser Abgabe werden **in die Verbesserung des Tierwohls in der Nutztierhaltung investiert**.

In der unten gezeigten Grafik sehen Sie den Prozentsatz der Teilnehmenden, die angegeben haben, dass Sie für die skizzierte Abgabe stimmen würden in Abhängigkeit von der Höhe in EUR/kg.

---- GRAFIK ----

[Die Grafik wird den Prozentsatz der Teilnehmenden, die für die sechs gezeigten Vorlagen mit „Ja. Ich stimme dafür.“ gestimmt haben, abbilden.]

Mit freundlichen Grüßen

Die Autoren der Studie

This survey asks people between the ages of 18 and 74 who live in Germany and maps the actual population structure of Germany for this age group.

What do you think?

Out of 100 respondents who were also asked the question about the development of **general meat consumption**, how many gave the answers "will decrease" and "will increase"?

Please estimate 2 numbers on this page: one for each answer "*will decrease*" and "*will increase*". The value for the answer "*will remain the same*" is calculated automatically in each line from your entries.

For each guess, if your estimated number differs from the correct number by 2 or less, you will receive an additional payment of **10 mingle points**. So you can get an additional payment of **max. 20 mingle points** on this page.

How many of 100 respondents gave the following answers?

	<i>will decrease</i> ↘	<i>will increase</i> ↗	will remain the same →	Sum
General meat consumption...	<input type="text"/>	<input type="text"/>	<input type="text" value="100"/>	<input type="text" value="100"/>

The value for "*will remain the same*" must be at least 0 and must not be negative. The sum must add up to 100.
